Dual Time Delay Switch, PN 7563

**NEW
PRODUCT!**

Do you need something to activate a timing retard at a certain time? Do you need help de-tuning the power of your small tire drag car? How about the ability to activate a nitrous solenoid 0.8-second into a run? Well look no further. The NEW DUAL TIME DELAY SWITCH can accomplish the precise task of improving your consistency at the track.

The Dual Time Delay Switch allows you to control two different circuits by providing or removing a ground based on time. As an added degree of control, you can adjust the On or Off times down to 0.01-second increments using a simple touch screen. To help confirm your settings, our LED read out will allow you to review exactly what you are setting.

Here are a few more features of the Dual Time Delay Switch:

- Activate two different circuits based on time such as a boost or nitrous controller.
- Digital read out and buttons for easy programming.
- Provide a ground or remove the ground for circuit activation.
- Program the time activation down to 0.01 second increments.
