## Lazer Gauges

That's right, MSD Ignition is introducing a line of performance instruments. These aren't your every day gauge with a dressed up pointer and face. In fact, there is no pointer! The Lazer Gauges are the most advanced, digitally controlled gauges with a truly unique form of relaying information to the driver.

The Lazer Gauge is something you need to see, but picture a spinning LED that is turned on and off at a precise moment creating a bright trace. (Remember when you used to play with a sparkler on the 4th of July? You can see the trace of the light in the air!) The computer control and instant reaction of the LED produces the most accurate and fastest reacting gauge available!

Using advanced digital controllers, the Lazer Gauges also provide other unique features such as:

- Dual sweep readouts so you can have two gauges in one unit.
- Shift points can easily be programmed by touching the face of the gauge.
- Accuracy within 2 rpm at 10,000 rpm.
- Programmable warning indicators.
- You can even program the gauge with a personal computer!

***Available Summer of 2006!***
