

Pro-Billet LT-1 Distributor

**NEW
PRODUCT!**

Fans of the GM LT-1 engine will be happy to hear that there is finally a complete Pro-Billet Distributor available for their engines!

MSD starts with an entire billet block of aluminum and machines it into a precise housing that fits in place of the factory piece. An advanced optical encoder is mounted in place of the factory Optispark for improved reliability. What's even better is that this pickup is adjustable!

One of the most important features is the ability to adjust the timing! That's right, you'll be able to tweak the ignition timing plus or minus 5-degrees! Think of the tuning you can now pull off on your LT-1.

High rpm stability is improved thanks to a large ball bearing assembly that is fixed in the billet housing. And of course, the entire assembly is topped with MSD's own injection molded distributor cap and rotor.

- Advanced optical encoder trigger design for accuracy and reliability.
- Easily adjust the timing up to +/-5°.
- Improved housing design and extra bolt eliminate leaks.
- Fresh air vented and sealed to keep the elements out.

'92-'94 Early Model (supplied with vent and hose assembly) PN 8381

'94-'96 Later Model

PN 83811
