Advanced Power System Starter, PN 5095

**NEW
PRODUCT!**

You can have all the spark energy you need, but if your starter won't spin the engine, you're not going anywhere. MSD's new Advanced Power System Starter will crank your engine over to get it fired up!

The APS Starter features all new components beginning with a three horsepower motor and through a 4.4:1 reduction gear set to deliver great torque - enough for high compression racing engines!

Inside the downsized housing you'll find a balanced armature that receives guidance by two ball bearings for smooth engagement and thousands of starts. Another handy feature is that the billet mounting block can be rotated in different positions to help clear oil pans and suspension parts. Also, the Starter is powder coated MSD red and will stay looking good, even though its underneath your car.

- **Gear reduction of 4.4:1 improves torque for great cranking.**
- **Three horsepower motor provides power for high compression engines.**
- **Ball bearing supported armature and pinion gear.**
- **Downsized design helps clearance issues with oil pans and exhaust.**
- **Mount can be clocked to assist in mounting issues.**
